POST	Path: /register
Description	Allows the user to self-register with web application; all user-supplied information must be checked for correctness. After registered, user will get stored in database. If user exists already or the username or password is too short, returns a 400 status code.
Consumes: application/JSON	Produces: application/JSON
Request Model USERNAME (string, required): <i>must be a string > len 5.</i> PASSWORD (string, required): <i>sent as plaintext and must be greater than len 5</i>	Example JSON: <pre>{ "username": "user1", "password": "password" }</pre>
Response Model USER_ID (string, required) USERNAME (string, required)	Example JSON: <pre>{ "User_id": "asdfkj13f12fas...", "Username": "user1" }</pre>
Http Status Code	Http Response Body
401 Bad Request	Empty
409 Resource Already Exists	Empty
406 Invalid Param Length	Empty
201 OK	Contains Response Model as JSON

POST	Path: /checkPassword
Description	<p>Allows the user to login with their email and password via Basic Authentication.</p> <p>NOTE: Shouldn't be called as all /game endpoints will automatically call it and perform basic authentication.</p>
Consumes: application/JSON	Produces: application/JSON
Request Model USERNAME (string, required): <i>must be a string greater than length 5</i> PASSWORD (string, required): <i>sent as plaintext. Must be greater than len 5</i>	Example JSON: <pre>{ "Username": "user1", "password": "password" }</pre>
Response Headers WWW-Authenticate (optional): <i>check httpbin for an example. Field filled if user registration fails.</i>	Example Headers: <p>"Www-authenticate": "Basic realm = 'Login Required'"</p>
Response Model AUTHENTICATED (bool, required)	Example JSON: <pre>{ "authenticated": true }</pre>
Http Status Code	Http Response Body
401 Bad Request	Empty
200 OK	Contains Response Model as JSON

POST	Path: /game/create
Description	Allows a user to create a new game and add it to the database. It will generate a randomly chosen word and return to the user the unique game id.
Consumes: application/JSON	Produces: application/JSON
Request Headers Username User-id	Example Headers: "username": "user1" "User-id": "7f832c2e054ba732f7d4b7e26..."
Request Model NONE	Example JSON: NONE
Response Model Game_ID (string, required): <i>returns unique game id of the newly created game to the user.</i>	Example JSON: { "Game_id": "fj4klfklsdlkf23..." }
Http Status Code	Http Response Body
401 Bad Request	Empty
201 OK	Contains Response Model as JSON

GET	Path: /game/list
Description	Allows a user to retrieve their in progress games and lists the game ids back to the user. If the user is not found or there are no games for a given user, returns an empty list.
Consumes: application/JSON	Produces: application/JSON
Request Headers username User-id	Example Headers: "username": "user1" "User-id": "7f832c2e054ba732f7d4b7e26..."
Response Model Games (array[string], required): <i>returns a list of unique game ids for in progress games for the user.</i>	Example JSON: { "Games": ["fj3l3kfj87hgbff", "fjsaswei3235rf123r", "2flkjdsf3f48fjs"] }
Http Status Code	Http Response Body
401 Bad Request	Empty
200 OK	Contains Response Model as JSON

POST	Path: /game/guess
Description	Allows a user to make a guess on an ongoing game. It returns data about the game including correct letters, misplaced letters, and number of guesses left. If the guess is valid, it decrements the guesses remaining.
Consumes: application/JSON	Produces: application/JSON
Request Headers Username user-id	Example Headers: "username": "user1" "user-id": "7f832c2e054ba732f7d4b7e26..."
Request Model Game_ID (string, required): <i>must be a valid, ongoing game id.</i> GUESS (string, required): <i>must be a 5 letter word. API will check for validity.</i>	Example JSON: <pre>{ "Game_id": "fj243f823fn2f8...", "Guess": "crane" }</pre>
Response Model Game_ID (string, required): <i>returns the game that is being played.</i> VALID (boolean, required): <i>returns whether or not the guess is a valid 5 letter word.</i> GUESSES_REMAINING (int, required): <i>returns how many guesses are remaining and decrements if they made a valid guess. (6 max)</i> CORRECT_GUESS (boolean, optional): <i>returns whether or not the guess was correct. Only used if the guess is valid.</i> CORRECT (array[int], optional): <i>returns the letter indices that are in a correct position. Only used if they guess incorrectly.</i> MISPLACED (array[int], optional): <i>returns the letters indices that are in the word but in the wrong position. Only used if they guess incorrectly.</i>	Example JSON: <pre>{ "Game_id": "fj243f823fn2f8...", "valid": true, "Correct_guess": false, "Guesses_remaining": 4, "Correct_guess": false, "correct": [0,1], "misplaced": [3]} </pre>
Http Status Code	Http Response Body
401 Bad Request	Empty
200 OK	Contains Response Model as JSON

GET	Path: /game/{game_id}
Description	Allows a user to retrieve the state of a requested game they are currently playing. It returns information of the number of guesses, correct letters and misplaced letters for the guesses made.
Consumes: application/JSON	Produces: application/JSON
Request Headers username User-id	Example Headers: "username": "user1" "User-id": "7f832c2e054ba732f7d4b7e26..."
Response Model GUESSES (int, optional): <i>returns the guesses the user has made with the indexes of the correct letters and misplaced letters. Not used if the game is over.</i> NUM_GUESSES (int, required): <i>returns how many guesses the user has used.</i> STATUS (string, optional): <i>Only used if the game is over. Returns win or lost depending on the game state.</i>	Example JSON: <pre>{ "Num_guesses": 1, "Guesses": [{ "Guess": "crane", "Correct": [0, 1], "Misplaced": [3] }] }</pre>
Http Status Code	Http Response Body
401 Bad Request	Empty
200 OK	Contains Response Model as JSON
